KELVIN GIORMANI

ORVIETO (Category B1)

- Made by the Italian international tannery group, the Gruppo Mastrotto spa, in Asia or South America.
- Top grain leather with strong fibers resistant to tears comparing with splits or fabrics. It breathes naturally and regulates temperature when it absorbs and releases humidity through natural pores which cannot be found in splits or artificial leather.
- Appearance: Matt
- Thickness: 1.3-1.5mm
- Corrected meaning that the leather has been sanded (or buffed) to reduce the visibility of natural markings of raw hides.
- Pigmented (dyed) with protected color-finishing on leather surfaces that serves to waterproof and ensures color consistency as well as high durability. It will just slightly fade under long sunlight exposure and is very well protected against normal household stains.
- Embossed with Dollaro Americano Print creates uniform appearance and greater texture on the leather surface. Embossing is a process that re-creates the leather surface pattern and makes it smoother as well as softer by dry milling. Our embossing process preserves the natural elegance and the feel of premium leather.
- Most popularly-used leather category for high-end contemporary sofas.

KELVIN GIORMANI

MARMO (Category C1)

- Made in Italy with primarily South American raw cow hides.
- Top grain leather with strong fibers resistant to tears comparing with splits or fabrics. It breathes naturally and regulates temperature when it absorbs and releases humidity through natural pores which cannot be found in splits or artificial leather.
- Appearance: Matt
- Thickness: 1.3-1.5mm
- Semi-corrected meaning that the leather has just been slighted buffed to try to keep its natural characteristics. This type of process is sometimes referred to as “half grain,” or “mezzo fiore.” This means that there has been some buffing (correction) on the hides, hence the follicle is not as evident as before but the mechanical friction of the buffing process is not as strong as to strip most of the characteristics and strength of the natural leather.
- Slightly pigmented (dyed) with protected color-finishing on the leather surface that serves to waterproof and ensures color consistency as well as high durability. The pigmentation of this leather is done with a very thin, yet, reliable and resistant layer of high quality pigment to try to preserve as much as possible the naturalness of the leather. It will just slightly fade under long sunlight exposure and is well protected against normal household stains.
- The design appearance of MARMO is realized by a special two-tone finishing process which creates some fine marble-look patterns on leather. These patterns give the aniline-look to the leather but the protected-leather nature of MARMO makes it more user-friendly than conventional aniline-type leathers.
- No embossing has been applied and the grain seen on the leather surface comes naturally and with variation within a hide. Without embossing, by just applying a simple milling process, the natural softness of the leather can be better preserved.
- It's perfect for users who want as much as possible the luxury flair and the natural touch of leather but try to minimize the effort of maintaining genuine leather.

SPESSO (Category C1)

- Made in Italy with primarily South American raw hides.
- Top grain leather with strong fibers resistant to tears comparing with splits or fabrics. It breathes naturally and regulates temperature when it absorbs and releases humidity through natural pores which cannot be found in splits or artificial leather.
- Appearance: Matt
- Thickness: 1.6-1.8mm
- Corrected meaning that the leather has been sanded (or buffed) to reduce the visibility of natural markings of raw hides.
- Pigmented (dyed) with protected color-finishing on leather surfaces that serves to waterproof and ensures color consistency as well as high durability. It will just slightly fade under long sunlight exposure and is very well protected against normal household stains.
- Embossed large-grain prints create uniform appearance and greater texture on the leather surface. Embossing is a process that re-creates the leather surface pattern and makes it smoother as well as softer by dry milling. Our embossing process preserves the natural elegance and the feel of premium leather.
- SPESSO can create the appearance of a finished sofa comparable to that of being made by ultra-thick materials such as TORO (around 3mm), with the prices significantly lower than those in TORO (Category F1). SPESSO can be applicable to almost all KELVIN GIORMANI models.

KELVIN GIORMANI

VINTAGE (Category D1)

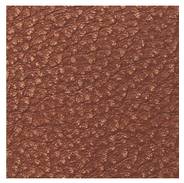

- Made in Italy with primarily buffalo raw hides of Asian origin.
- Top grain leather with strong fibers resistant to tears comparing with splits or fabrics. It breathes naturally and regulates temperature when it absorbs and releases humidity through natural pores which cannot be found in splits or artificial leather.
- Appearance: Matt
- Thickness: 1.2-1.4mm
- Natural grain aniline leather with matching color at the base of the hides and is finished with waxes and aniline. It's kneaded by hand with a special treatment that livens up the surface and gives it a peculiar velvet touch. The hand-made vintage effect gives this article its main character.
- With such a vivid vintage pattern, this article is particularly good to go with sofas with minimalistic designs or with less irregular shapes-and-forms.

KELVIN GIORMANI

RICCO (Category D1)

- Made in Italy with primarily South American raw cow hides.
- Top grain leather with strong fibers resistant to tears comparing with splits or fabrics. It breathes naturally and regulates temperature when it absorbs and releases humidity through natural pores which cannot be found in splits or artificial leather.
- Appearance: Matt
- Thickness: 1.6-1.8mm
- Semi-corrected meaning that the leather has just been slighted buffed to try to keep its natural characteristics. This type of process is sometimes referred to as “half grain,” or “mezzo fiore.” This means that there has been some buffing (correction) on the hides, hence the follicle is not as evident as before but the mechanical friction of the buffing process is not as strong as to strip most of the characteristics and strength of the natural leather.
- Slightly pigmented (dyed) with protected color-finishing on the leather surface that serves to waterproof and ensures color consistency as well as high durability. The pigmentation of this leather is done with a very thin, yet, reliable and resistant layer of high-quality pigment to try to preserve as much as possible the naturalness of the leather. It will just slightly fade under long sunlight exposure and is well protected against normal household stains.
- No embossing has been applied and the grain seen on the leather surface comes naturally and with variation within a hide. Without embossing, by just applying a simple milling process, the natural softness of the leather can be better preserved.
- It's perfect for users who want as much as possible the luxury flair and the natural touch of leather but try to minimize the effort of maintaining genuine leather.
- 1.6-1.8mm is a special thickness for cow leather that delivers rich and volume look and very fulfilling hand-touch; the thickness also releases deep and natural skin grain pattern on the leather.

KELVIN GIORMANI

NEOBUCK (Category D1)

- Made in Italy with primarily cow raw hides of European origin.
- Top grain leather with strong fibers resistant to tears comparing with splits or fabrics. It breathes naturally and regulates temperature when it absorbs and releases humidity through natural pores which cannot be found in splits or artificial leather.
- Appearance: Matt (mono-tone) with a light nubuck effect on top
- Thickness: 1.2-1.4mm
- Semi-corrected meaning that the leather has just been slighted buffed to try to keep its natural characteristics. This type of process is sometimes referred to as “half grain,” or “mezzo fiore.” This means that there has been some buffing (correction) on the hides, hence the follicle is not as evident as before but the mechanical friction of the buffing process is not as strong as to strip most of the characteristics and strength of the natural leather.
- Slightly pigmented (dyed) on the leather surface that serves to ensures color consistency as well as high durability. The pigmentation of this leather is done with a very thin, yet, reliable and resistant layer of high-quality pigment to try to preserve as much as possible the naturalness of the leather.
- No embossing has been applied and the grain seen on the leather surface comes naturally and with variation within a hide. Without embossing, by just applying a simple milling process, the natural softness of the leather can be better preserved.
- The slightly “nubuck” effect being applied, Neobuck delivers a light hand-feel of suede-leather, at the same time, it gives a more uniform-look than conventional nubuck leather can offer. As a semi-aniline type of leather, Neobuck (Grade D1) is not as protected as EuroSoft (Grade C1), and it has a similar maintenance characteristics as those of Vintage (Grade D1).
